

OMEGA® Tracer® C-Fab Create

This package is NOT for clinical use with patients.

OMEGA Tracer C-Fab Create software is a stand-alone software package that provides the ability to receive, manage, create and carve files for AK, AFO, and spinal shapes created by measurements. Using above-knee, spinal, knee, and AFO templates provided, facilities can easily create a custom shape by taking patient measurements and then applying them to one of these templates. A full suite of tools allows modification of shapes after they have been created. OMEGA Tracer software provides precise control over volume, skeletal dimensions, and subtle contour changes, as well as adjustments to adduction, flexion, spinal curves, symmetry, and much more. This basic package is designed for use by commercial fabrication facilities.

This package comes with the latest version of OMEGA Tracer software with full technical support and a security key.

FEATURES

- **Designed specifically for use by commercial central fabrication facilities**
- **Communicates with most standard carvers**
- **Inspect and modify shape files with a full complement of OMEGA Tracer tools before production**
- **Create custom AK sockets, AFOs and spinal braces on your computer by merging patient measurements with existing shape templates**
- **Create your own personal shape library—based on the built-in templates or existing shape files**
- **Connects directly to the Internet to receive, sort, manage, and carve files from incoming OMEGA Tracer files and other CAD formats.**
